Escalation Team Reference

Layer-based routing for the coordinated telehealth case

Routing rule: Team names vary by organization. Use the failed or suspected layer after approved Tier 1 verification. Production routing must follow the health system's current ownership matrix.

Routing matrix

Receiving function	Route when evidence points to	Do not route solely because
Epic Application / Analyst Team	Epic application build, chart authorization/security configuration, workflow configuration, or Epic-owned integration outside Tier 1 authority.	The ticket mentions Epic.
Identity Administrators / Identity Security	Confirmed Entra prerequisite/provisioning problem, MFA/Conditional Access issue, suspicious sign-in/risk investigation, or privileged identity action.	A user cannot sign in; first identify the configured authentication path.
Senior Deployment / Endpoint Support	Persistent hardware, driver, managed-device restriction, OS/app issue, or endpoint remediation outside Tier 1.	A camera or printer failed once.
Network Engineering / Infrastructure	Site-correlated or repeated connectivity failure; DNS/proxy/VPN/reachability/media-quality network evidence.	A Teams join attempt failed.
M365 / Teams Administration	Effective Teams meeting policy/tenant configuration, Teams service issue, or managed meeting restriction is evidenced.	The workflow uses Teams.
Scheduling Administration	Appointment/join-path record, scheduling workflow, or current-link generation/delivery discrepancy.	A telehealth visit is involved.
Epic Analyst for scheduling integration	Epic-owned scheduling or Teams EHR connector integration is specifically established as the failed layer.	The appointment originated in Epic.

Case routing

Condition in TH-2026-0907-01	Receiving function
Epic-side chart-access assignment missing while deployment-specific Entra prerequisite is present	Epic Application / Analyst Team
Camera permission corrected through approved local procedure and video preview passes	No endpoint warm-transfer required after successful re-test
Superseded join reference differs from the current scheduling record	Scheduling Administration

Warm-transfer evidence checklist

- Exact timestamp and ticket reference.
- Privacy-minimized role-based scenario description for the synthetic exercise.
- Observed signals and checks already completed.
- Current operational impact.
- Reason the Tier 1 boundary was crossed.
- One explicit action requested from the receiving team.
- No invented ETA.
