# Case Report Template

*Complete one report per ticket handled during this activity.*

**CASE ID / TICKET #**

**DATE**

**TECHNICIAN NAME**

**CLINICIAN / USER NAME**

**DEPARTMENT**

**CATEGORY (Hardware / Software / Network / Access)**

**PRIORITY (P1–P4)**

**STATUS (New / In Progress / Resolved)**

**ISSUE SUMMARY (AS REPORTED BY THE USER)**

**DIAGNOSTIC / TROUBLESHOOTING STEPS TAKEN**

**RESOLUTION**

**RESOLUTION TIME**

**KB ARTICLE LINKED (if any)**

# Provisioning Workflow Checklist

*New account creation — complete in order during onboarding.*

- [ ] Verify ticket approval status and pre-authorization signature before beginning.
- [ ] Confirm the requester's role and determine the correct standard access bundle.
- [ ] Populate core identity attributes: full legal name, UPN/username, job title, department, manager.
- [ ] Provision the mailbox and assign standard role-based mailbox access.
- [ ] Assign baseline Role-Based Access Control (RBAC) security groups for the role.
- [ ] Assign required licenses (e.g., Microsoft 365 E3 or role-specific bundle).
- [ ] Set a temporary complex password and require password change on first sign-in.
- [ ] Enforce Multi-Factor Authentication (MFA) registration at first sign-in.
- [ ] Add the account to the correct Teams and shared mailbox memberships for the department.
- [ ] Log the transaction ID, creation timestamp, and ticket number in the case record.

**NOTES / EXCEPTIONS**

# Attribute Verification Checklist

*Confirm identity and account attributes match the approved request.*

- [ ] Full legal name matches the approved request exactly.
- [ ] Username / UPN follows the standard naming format (first.last@domain).
- [ ] Job title and department code are correct and match the org chart.
- [ ] Manager assignment is correct.
- [ ] Employee ID (if applicable) is present and accurate.
- [ ] Assigned license bundle matches the role's standard access package.
- [ ] Group memberships match the role's standard access profile — no extra or missing groups.
- [ ] No duplicate or orphaned account exists for this user.
- [ ] Account status shows Active with no unexpected sign-in blocks.

**NOTES / EXCEPTIONS**

*Role transitions, attribute updates, and access changes for existing accounts.*

- [ ] Verify the role-change or update authorization and its effective date.
- [ ] Update core target attributes: title, department, manager, office/location.
- [ ] Perform an RBAC delta adjustment: revoke legacy department groups and entitlements.
- [ ] Add the target role's security groups and distribution lists.
- [ ] Verify core identifiers (UPN, primary email, employee ID) remain unchanged.
- [ ] Confirm mailbox and OneDrive access are unaffected unless explicitly part of the change.
- [ ] Document the delta audit log (groups added/removed).
- [ ] Flag any non-standard permission retention request for Tier 2 review.

**NOTES / EXCEPTIONS**

# ITSM Change Request Checklist

*Confirm the ticket itself is complete, categorized, and properly documented.*

- [ ] Ticket includes a clear, complete description of the request or issue.
- [ ] Category is set correctly (Hardware / Software / Network / Access).
- [ ] Priority is set based on category and clinical impact, not category alone.
- [ ] SLA clock reflects the assigned priority and is running or correctly paused.
- [ ] Relevant KB article is linked, if one exists for this issue type.
- [ ] Approver name and approval date are documented for access/service requests.
- [ ] Work performed matches what was actually approved — no scope creep.
- [ ] Ticket status is updated to reflect current state (In Progress / Resolved / Fulfilled).
- [ ] Closure notes summarize what was done and when, for audit purposes.

**NOTES / EXCEPTIONS**

# Account-Settings Verification Checklist

*Final check of the account's configuration before closing the ticket.*

- [ ] Account status shows Active with sign-in allowed.
- [ ] Assigned licenses match what was approved on the request.
- [ ] MFA is registered and enforced for the account.
- [ ] Mailbox is provisioned and mail flow tested successfully.
- [ ] OneDrive is provisioned and accessible.
- [ ] Team and shared mailbox memberships match the approved access.
- [ ] Group memberships shown in the Groups tab match the role's standard profile.
- [ ] A test sign-in was performed and confirmed successful.

**NOTES / EXCEPTIONS**

# Secure Calendar Checks Checklist

*Confirm calendar sharing and visibility settings are appropriate for a healthcare environment.*

- [ ] Calendar sharing permissions match the user's role (standard clinician access, not admin-level).
- [ ] Shared/department calendar visibility is limited to authorized staff only.
- [ ] No external (outside-organization) calendar sharing is enabled unless explicitly approved.
- [ ] Appointment details are not exposed to delegates beyond what their role requires (e.g., free/busy only where appropriate).
- [ ] Calendar sync (mobile and desktop) is functioning correctly.
- [ ] Retention and compliance policies are applied to the calendar per organizational policy.
- [ ] Any calendar delegation is documented and time-bound where applicable.

**NOTES / EXCEPTIONS**
