Case Report – Contoso IT Support

Tier 1 Microsoft 365 Platform Support · Morning queue, 17 August 2026

MOCK DOCUMENT – synthetic material created for this training simulation. Contoso is a placeholder; all names, IDs, confirmation messages and timestamps are synthetic. No patient identifiers or PHI are recorded in this report.

Case ID:	CASE-0817-014	**Priority:**	P2 (clinical start deadline)
Agent:	Dennis Lam, Tier 1 Microsoft 365 Platform Support	**Date:**	17 Aug 2026
Case start timestamp:	08:50	**Case end timestamp:**	11:52

All times are local, 24-hour, on 17 Aug 2026. Evidence was gathered only through Tier 1 role-scoped views; anything outside that scope is recorded as “Not visible to assigned role” and escalated.

Job aids used: provisioning workflow, attribute verification, maintenance procedure, ITSM change request, account-settings verification and secure calendar checklists; the Tier 1 role, evidence and escalation matrix; the Contoso escalation team reference. Ownership moved to a receiving team only after that team accepted.

Queue scan and initial work order

Quick queue scan 08:50–08:53. Intake impact, dependencies and deadlines were marked before any work began.

Ticket	ID	Work item	Intake impact assessment	Priority	Dependency / deadline
1	CNT-3301	Account creation – Dr. Avery Wallace (requester Morgan Reyes)	One user; no workaround; clinician cannot start without access	P2	Clinic start 10:00
2	CNT-3302	Attribute verification – same account	One user; same deadline	P2	Starts only after Ticket 1 evidence exists
3	CNT-3303	Approved access change – Jamie Ortiz (requester Casey Nguyen)	One user; transfer effective today; not safety-critical	P3	Approval and effective date confirmed first
4	CNT-3304	Outlook troubleshooting – Dr. Kai Mendes	One user; workaround: EHR secure messaging; started 08:15	P3	Independent
5	CNT-3305	Shared calendar configuration checks (requester Rowan Ellis)	One team; PHI risk unknown at intake	P3, re-assess after checks	Independent

Initial work order: Ticket 1 → Ticket 2 → Ticket 3, with Tickets 4 and 5 worked in parallel. Ticket 5’s read-only review ran while Ticket 4 waited for IAM acceptance. Any PHI or patient-safety finding moves a ticket to P2.

Dataset note: CNT-3301 to CNT-3305 come from contoso_ticket_dataset and were assigned to Tickets 1–5 in open-time order. The issue text logged on those rows does not match the scenario intake, so it was flagged to the shift lead for correction rather than edited by Tier 1.

Ticket 1: Account creation

Ticket ID: CNT-3301 · **Requester:** Morgan Reyes, Practice Manager, Internal Medicine · **New user:** Dr. Avery Wallace, Hospitalist, Internal Medicine · **Start:** 10:00 today · **Priority:** P2

Provisioning workflow checklist, completed in order from 08:55 to 09:15 using Tier 1 delegated actions only:

#	Workflow step	Status	Time	Confirmation ID / system message
1	Approval and pre-authorization verified	Complete	08:55	ITSM approval APR-55120 by Morgan Reyes, 16 Aug 2026 16:40; signature present

#	Workflow step	Status	Time	Confirmation ID / system message
2	Role and access bundle confirmed	Complete	08:57	Standard bundle CLIN-PHYS-STD (Hospitalist)
3	Core identity attributes populated	Complete	09:01	“User added successfully”, TXN-M365-778341; UPN avery.wallace@contoso.com; title Hospitalist; department IM-210; manager Morgan Reyes
4	Mailbox provisioned with role-based access	Complete	09:04	User mailbox queued; status “Ready” confirmed 09:12 after licensing
5	Baseline RBAC security groups assigned	Complete	09:06	SG-AllStaff, SG-Clinical-Staff, SG-IM-Physicians; “Group memberships updated”
6	Licenses assigned	Complete	09:08	Microsoft 365 E3; “Licenses updated”, TXN-M365-778356
7	Temporary password, change at first sign-in	Complete	09:09	Change-at-first-sign-in set; password released to manager by approved channel (not recorded)
8	MFA registration enforced at first sign-in	Complete	09:10	In scope of the tenant MFA registration policy through SG-AllStaff
9	Teams and shared mailbox memberships	Complete	09:13	Team “IM Hospitalists” (Member); shared mailbox IM-Hospitalist-Desk (Full Access)
10	Transaction logged in case record	Complete	09:15	TXN-M365-778341, created 09:01, ticket CNT-3301

Notes/exceptions: No step needed elevated rights, and nothing exceeded the approved package. EHR access is outside this ticket and stays with Clinical Application Analysts.

Disposition: Completed – 09:16. Provisioning evidence passed to Ticket 2.

Ticket 2: Attribute verification

Ticket ID: CNT-3302 · **Account:** avery.wallace@contoso.com · **Started:** 09:18, immediately after Ticket 1 evidence · Read-only Tier 1 views

Category	Result	Evidence	Time
Microsoft 365 access	Pass	E3 active; Exchange, Teams and OneDrive enabled; name, UPN, title, department and manager match APR-55120; no duplicate account	09:21
Mailbox provisioning	Pass	User mailbox; primary SMTP matches UPN; retention policy Contoso-Clinical-Std applied; test message delivered	09:24
Group membership	**Fail**	Static groups present; dynamic group SG-IM-Clinical-Staff absent at 09:22 and again after the 15-minute sync window	09:38
Sign-in attributes	Pass	Account enabled; sign-in not blocked; password change required at first sign-in. MFA registration: Not visible to assigned role	09:26

Baseline evidence (Fail): SG-IM-Clinical-Staff shows membership processing “Update in progress” since 09:02, with no error text; department attribute IM-210 is populated. Impact: department channel and site unavailable, but sign-in, mail and Teams chat work, so the 10:00 start is not blocked.

Escalation team: Identity and Access Management (IAM), IAM-20419, accepted by R. Chen at 09:44. Requested action: complete SG-IM-Clinical-Staff membership and confirm MFA registration after first sign-in.

Disposition: Escalated – 09:44.

Ticket 3: Access change

Ticket ID: CNT-3303 · **Checklists:** Maintenance procedure; ITSM change request · **Priority:** P3

Approval confirmed at 09:50: both required approvals are attached as system-timestamped ITSM actions, the effective date is today, and the requester was verified by call-back to the HR directory number. Only Tier 1-delegated group and attribute changes were executed.

- **Change ID:** CHG-24871
- **Affected user/Account:** Jamie Ortiz, Registered Nurse – jamie.ortiz@contoso.com (employee ID E-10482)
- **Requester:** Casey Nguyen, HR Business Partner – submitted 16 Aug 2026 14:10
- **Approval evidence/Approver:** ITSM approval actions attached: (1) Dana Whitfield, Nurse Manager, Cardiology Step-Down – 16 Aug 2026 15:22; (2) Lee Hammond, Nurse Manager, Med-Surg 4 West – 16 Aug 2026 16:05
- **Access before:** SG-MedSurg-4W-Staff; DL-4West-Nursing; Team “4 West Nursing”; shared mailbox 4W-Charge-Desk (Full Access)
- **Access after:** SG-Cardiology-SD-Staff; DL-Cardiology-Nursing; Team “Cardiology Step-Down”; shared mailbox Cardio-SD-Desk (Full Access, no Send As). All 4 West entitlements removed; title, department (CARD-310) and manager updated.
- **Business justification:** Approved internal transfer from Med-Surg 4 West to Cardiology Step-Down, effective 17 Aug 2026. The new role needs unit communication access, and prior-unit access is removed under least privilege.
- **Implemented by:** Dennis Lam, Tier 1 Microsoft 365 Platform Support
- **Implementation timestamp:** 17 Aug 2026 10:02–10:09 (delta audit log: 4 removed, 4 added)
- **Verification outcome:** Pass. Groups tab matches the Cardiology profile; UPN, primary email and employee ID unchanged; mailbox and OneDrive unaffected. User confirmed by phone that the new Team and Cardio-SD-Desk open and 4W-Charge-Desk no longer appears.
- **Verification timestamp:** 17 Aug 2026 10:16
- **Exception/Escalation:** User asked to keep 4W-Charge-Desk for one week. This is not in the approval, so it was not implemented and was flagged for Tier 2 review (TIER2-7712). EHR unit roles stay with Clinical Application Analysts.

ITSM record: category Access; priority P3; KB0012045 linked; work matches the approval; status Fulfilled; closure notes entered 10:19.

Disposition: Completed – 10:19.

Ticket 4: Outlook troubleshooting

Ticket ID: CNT-3304 · **User:** Dr. Kai Mendes, Cardiology · **Symptom:** new Outlook for Windows repeats the sign-in prompt; mail not updated since 08:15 · **Priority:** P3 (workaround: EHR secure messaging) · **Worked:** from 10:24

Account-settings verification, run first at 10:28:

- **User Principal Name (UPN):** kai.mendes@contoso.com – matches directory record
- **Primary Simple Mail Transfer Protocol (SMTP):** kai.mendes@contoso.com – matches UPN
- **License status:** Microsoft 365 E3 – active, Exchange Online enabled
- **Multi-Factor Authentication (MFA) registration status:** Not visible to assigned role
- **Account enabled:** Yes – sign-in allowed

Settings are correct, but a runbook stop condition applies: Outlook on the web shows the same prompt loop, pointing to authentication rather than the client, and MFA details are not visible. No Tier 1 fix applies; no elevated access was requested.

Warm transfer to: Identity and Access Management (IAM)

- **Baseline findings:** UPN, primary SMTP, E3 license and account status correct; prompt loop in new Outlook and Outlook on the web; no service-health incident.
- **Steps tried:** Service health check; Settings > Accounts > Your accounts shows “Sign in required”; one sign-out/sign-in per runbook; browser reproduction test.
- **Requested action:** Verify MFA registration and sign-in logs for kai.mendes@contoso.com and restore authentication.

Transferred 10:44; accepted by R. Chen (IAM-20427) at 10:52. User informed.

Disposition: Escalated – 10:52.

Ticket 5: Configuration checks

Ticket ID: CNT-3305 · **Calendar:** Cardiology Clinic – Procedures (department calendar) · **Review:** 10:35–10:58, read-only, no changes made · **Priority:** raised P3 → P2 at 10:58

Check	Result	Finding (configured vs. expected)
Permissions review	**Fail**	Default (all staff): Full Details; expected Free/Busy. Delegate Scheduling-Temp-03: Editor, no end date; expected time-bound
Sharing scope	**Fail**	Shared with partnerclinic.example at Limited Details; expected no external sharing; no approval on file
PHI exposure risk	**Fail**	Subjects contain patient identifiers, visible to all staff and externally. Identifiers not copied; screenshot in restricted evidence location

Warm transfer 1 – Privacy/Security Incident Response (11:02; accepted by M. Osei, PSIR-0391, 11:08)

- **Baseline findings:** Potential PHI exposure: patient identifiers in calendar subjects visible internally and to one external domain.
- **Steps tried:** Read-only review; evidence restricted; nothing changed.
- **Requested action:** Assess the exposure and direct containment. Ticket stays open until acknowledged.

Warm transfer 2 – Messaging Support (11:12; acceptance pending at 11:50)

- **Baseline findings:** Configured vs. expected: Default Full Details vs. Free/Busy; external sharing vs. none; open-ended Editor delegate vs. time-bound.
- **Steps tried:** Read-only review; no Exchange configuration changed.
- **Requested action:** Apply the Exchange calendar corrections directed under PSIR-0391.

Disposition: Pending – awaiting Messaging Support acceptance.

Case summary

Case CASE-0817-014 ran from 08:50 to 11:52. Dr. Wallace's 10:00 start was met, with core access live at 09:16.

Ticket	ID	Final disposition	Open item and owner
1 Account creation	CNT-3301	Completed 09:16	None
2 Attribute verification	CNT-3302	Escalated 09:44	IAM-20419: group membership and MFA confirmation (IAM)
3 Access change	CNT-3303	Completed 10:19	TIER2-7712: retention request (Tier 2)
4 Outlook troubleshooting	CNT-3304	Escalated 10:52	IAM-20427: MFA and sign-in verification (IAM)
5 Configuration checks	CNT-3305	Pending	Messaging Support acceptance; PSIR-0391 containment

Time to resolution: Ticket 1, 21 minutes; Ticket 3, 29 minutes. **SLA met:** Y for Tickets 1 and 3; SLA clocks still running on Tickets 2, 4 and 5.

Afternoon-shift handoff:

1. Confirm Messaging Support accepts CNT-3305 by 13:00; if not, notify the shift lead. Do not close or reassign CNT-3305 until Privacy/Security Incident Response confirms containment.
2. When IAM-20419 closes, re-check group membership for avery.wallace@contoso.com, record Pass with a timestamp, and close CNT-3302.
3. When IAM-20427 returns, confirm with Dr. Mendes that new Outlook syncs, then close CNT-3304.
4. Do not restore 4 West access for Jamie Ortiz unless TIER2-7712 is approved.
5. Shift lead to correct the dataset issue text for CNT-3301 to CNT-3305.
