Escalation Team Reference - Contoso

MOCK REFERENCE - synthetic document created for this training simulation. Organization name (Contoso) is a placeholder.

Team	Scope	Communication norms
Exchange Administrators	Email delivery failures, distribution list issues, mailbox provisioning and permissions, calendar and Exchange-related connector problems.	Submit via ticket for standard mailbox/DL issues. Call the on-call line only for organization-wide delivery outages. Include affected mailbox or DL name and exact error text.
Compliance Officer	Data handling questions, potential policy violations, access requests involving regulated or sensitive records, retention and audit-trail concerns.	Ticket with a compliance flag for routine questions. For a suspected data exposure or breach, contact the Compliance Officer directly and do not close or reassign the ticket until acknowledged.
Clinical Application Analysts	Configuration and behavior of clinical or patient-facing applications - order sets, clinical workflows, application-level errors not caused by network or hardware.	Ticket during business hours for non-urgent configuration questions. For an application issue affecting active patient care, call directly and flag as P1/P2 in the ticket.
