LEARNER SUBMISSION | APPROXIMATELY 1,800 WORDS

# CASE REPORT

## Five-ticket Azure and Microsoft 365 disruption case

**SUBMISSION STANDARD** Complete all five ticket records and the case summary. Quote only the simulated event evidence supplied with this activity. Do not include real patient information, credentials, tenant identifiers, or screenshots from a production environment.

| | |
|---|---|
| **Learner name** | [Enter name] |
| **Submission date** | October 23, 2026 |
| **Shift/case window** | Monday morning disruption scenario |
| **Files used** | Mock ticket set, mock service-health snapshot, Tier 1 reference set, Escalation Team Reference |

## Required determination labels

| | |
|---|---|
| **Platform correlation** | The symptom aligns with the affected service, geography, and event window; local checks do not identify a separate cause. |
| **Verified local cause** | The approved Tier 1 check identifies an account, group, license, device, application, or configuration finding that explains the symptom. |
| **Undetermined** | Available evidence is insufficient; document the uncertainty and warm-transfer with a specific ask. |

**Official reference basis:** Azure Service Health | Microsoft cloud shared responsibility | HHS HIPAA Security Rule

## Service Health baseline and triage scan

| | |
|---|---|
| **Recorded** | 07:35 Monday, before opening any ticket. Source: mock Azure Service Health snapshot (06:50). In production: check Azure Status first; request Service Health access through the team lead. |
| **SIM-ENTRA-3108-01** | Service issue \| Microsoft Entra ID \| East US users \| Active, investigating \| 05:40 start \| intermittent authentication failures \| next update 07:45 |
| **SIM-AZFILES-3108-02** | Advisory \| Azure Files \| East US \| Active, mitigation in progress \| 05:55 start \| Azure File Sync delays \| next update 08:00 |
| **Not in snapshot** | Azure App Service; Microsoft 365 Teams or licensing. |
| **Triage scan** | **Aligns with an event:** TKT-3101 (Entra sign-in), TKT-3105 (Azure Files sync)<br>**Points to a local cause:** TKT-3102 (group membership), TKT-3104 (license)<br>**No matching event:** TKT-3103 (EHR portal fails after sign-in) |
| **Work order** | High priority first: TKT-3101, TKT-3103, TKT-3105; then TKT-3102, TKT-3104. |

SECTION 1 OF 6

# TICKET 1 RECORD | MULTI-CLINICIAN AUTHENTICATION FAILURES

**Complete every required field**

| | |
|---|---|
| **Ticket ID** | TKT-3101 |
| **Reported symptom** | Clinicians on managed workstations in emergency, ambulatory, and scheduling teams cannot sign in to Microsoft 365 or the EHR portal: 8+ users, three departments, one 20-minute window. |
| **Affected workflow** | Identity: Microsoft Entra ID sign-in for Microsoft 365 and the EHR portal. |
| **Service-health evidence** | Azure Service Health (mock) \| SIM-ENTRA-3108-01 \| Microsoft Entra ID \| East US users \| Active, investigating \| 05:40 start, 06:50 snapshot \| next update 07:45 |

## Tier 1 verification record

| # | Required entry | Learner response |
|---|---|---|
| 1 | Approved check performed | **Microsoft 365 support checklist**<br>**Service health:** SIM-ENTRA-3108-01 (no Microsoft 365 entry)<br>**Account status:** Undetermined per user; no account change reported<br>**License:** Not relevant; failure occurs at sign-in<br>**Provisioning:** None new; users worked the prior shift<br>**Device:** Managed; no common change recorded<br>**Exact error:** “We could not sign you in. Try again later or contact your support team.”<br>**Comparison:** Same error, 8+ users, three departments, two Entra-dependent apps<br>**Determination:** Platform correlation |
| 2 | Evidence compared or ruled out | Matches SIM-ENTRA-3108-01 on service, geography, window (ticket 07:04; event since 05:40), and symptom. Ruled out: device change, single-account fault, Azure Files advisory. |
| 3 | Scope boundary observed | No account, license, group, Conditional Access, MFA, tenant, Azure, or application change; no password or MFA reset. |

**Determination** *Choose one: Platform correlation | Verified local cause | Undetermined*

**Platform issue — Platform correlation**
Event: SIM-ENTRA-3108-01.

**Evidence-based rationale** *Cite the exact event or checklist finding that supports the label*

SIM-ENTRA-3108-01 reports East US users “may experience intermittent authentication failures” since 05:40, matching this ticket’s service, geography, window, and symptom. Local checks found no separate cause: no device change, many users across departments, and Microsoft 365 and the EHR portal both fail at the same sign-in step. This supports correlation, not proof for each user.

## Disposition and communication *State Resolved, Escalated, or Pending. Add a user message or warm-transfer summary when required.*

**Pending: Microsoft-owned event; no local finding to transfer.**

### Status communication

**Audience/channel:** Affected clinicians | ticket update and approved email

**What is happening:** Some staff cannot sign in to Microsoft 365 or the EHR portal

**What is confirmed:** Microsoft reports a sign-in problem in our region, under investigation

**What is being done:** Tracking Microsoft's updates; checking new reports

**Authorized workaround:** None provided

**Next update:** After Microsoft's 07:45 update

**Prepared by/time:** Tier 1 Technician | 07:42

> *Some staff cannot sign in to Microsoft 365 or the EHR portal this morning. Microsoft has confirmed a sign-in problem affecting our region and is investigating. No workaround or fix time has been announced. We will update you after Microsoft's next update, expected at 07:45.*

**Escalation trigger:** If failures persist after Microsoft resolves the event, re-run the checklist and warm-transfer to Identity Administrators.

SECTION 2 OF 6

# TICKET 2 RECORD | SINGLE-CLINICIAN SHARED-DRIVE ACCESS DENIED

**Complete every required field**

| | |
|---|---|
| **Ticket ID** | TKT-3102 |
| **Reported symptom** | One cardiology clinician signs in normally but gets “Access denied” on the Clinical Shared Drive; clinic colleagues can open it. |
| **Affected workflow** | Identity/access: Clinical Shared Drive, controlled by group Clinical-SharedDrive-Access. |
| **Service-health evidence** | Azure Service Health (mock) \| SIM-ENTRA-3108-01 \| Microsoft Entra ID \| East US users \| Active, investigating \| 05:40 start, 06:50 snapshot (candidate; ruled out) |

## Tier 1 verification record

| # | Required entry | Learner response |
|---|---|---|
| 1 | Approved check performed | **Entra ID account verification checklist**<br>**Service health:** SIM-ENTRA-3108-01<br>**User object:** Confirmed (identifiers withheld)<br>**Account status:** Active<br>**Sign-in:** Succeeds<br>**Group membership:** Not a member of Clinical-SharedDrive-Access<br>**Conditional Access/MFA:** No failure indicated; not reviewed further<br>**Pattern:** Single user; colleagues succeed<br>**Determination/team:** Local cause; Identity Administrators |
| 2 | Evidence compared or ruled out | Ruled out: Entra event (sign-in works; colleagues unaffected).<br>The ticket ties the drive to Clinical-SharedDrive-Access but not where that group is managed (cloud or synced), so Tier 1 does not assume it. |
| 3 | Scope boundary observed | No group membership, Conditional Access, MFA, account, or permission change. |

**Determination** *Choose one: Platform correlation | Verified local cause | Undetermined*

**Local issue — Verified local cause**
Finding: not a member of Clinical-SharedDrive-Access.

**Evidence-based rationale** *Cite the exact event or checklist finding that supports the label*

The account is active and sign-in succeeds, so the Entra sign-in event does not explain “Access denied.” The membership extract shows the clinician missing from Clinical-SharedDrive-Access, the group the ticket names for this drive, while colleagues open it normally. The missing membership explains the symptom.

## Disposition and communication *State Resolved, Escalated, or Pending. Add a user message or warm-transfer summary when required.*

**Escalated: group changes are outside Tier 1 scope.**

### Warm-transfer summary

**Ticket and workflow:** TKT-3102 | Clinical Shared Drive access

**Service-health baseline:** Azure Service Health (mock) | SIM-ENTRA-3108-01 | Microsoft Entra ID | East US users | Active, investigating | 05:40 start, 06:50 snapshot

**Observed impact:** One clinician cannot open the drive; colleagues unaffected

**Tier 1 checks and results:** Account active; sign-in succeeds; not in Clinical-SharedDrive-Access; no Conditional Access/MFA failure indicated

**Evidence ruled out:** Entra event; drive-wide outage

**Remaining uncertainty:** Whether membership was never requested, unapproved, or failed to sync; whether access is authorized

**Receiving team:** Identity Administrators

**Specific ask:** Verify the clinician’s approved access and, if authorized, add membership to Clinical-SharedDrive-Access; report whether provisioning or sync caused the gap.

**Transfer/acceptance:** 08:05 | Identity Administrators queue | acceptance pending

**User update:** 08:06, request passed to access team | next update 10:00

SECTION 3 OF 6

# TICKET 3 RECORD | EHR ACCESS PORTAL UNAVAILABLE

**Complete every required field**

| | |
|---|---|
| **Ticket ID** | TKT-3103 |
| **Reported symptom** | Users sign in successfully, then the EHR access portal shows “Service unavailable.” Teams and Microsoft 365 work for the same users. |
| **Affected workflow** | EHR: customer-managed portal on Azure App Service (PaaS), Entra-federated, East US. |
| **Service-health evidence** | Azure Service Health (mock) \| no App Service event \| East US \| 06:50 snapshot. SIM-ENTRA-3108-01 present but not matching. |

## Tier 1 verification record

| # | Required entry | Learner response |
|---|---|---|
| 1 | Approved check performed | **Cloud verification checklist**<br>**Model:** PaaS (Azure App Service)<br>**Architecture:** App Service host, Entra federation, East US<br>**Service Health:** No App Service event<br>**Failure point:** Application, after authentication<br>**Shared responsibility:** Microsoft runs the platform; the organization owns the portal app, its configuration, and identity integration<br>**Availability:** Sign-in completes; Teams and Microsoft 365 work<br>**Transfer:** Tier 2 Engineering, 07:50 |
| 2 | Evidence compared or ruled out | Ruled out: Entra event (sign-in completes first); Azure Files advisory (different service); device or account (Microsoft 365 works).<br>Uncertain: application fault versus an unposted platform fault; number of affected users. |
| 3 | Scope boundary observed | No application, App Service, Azure, or identity setting viewed or changed; no restart. |

**Determination** *Choose one: Platform correlation | Verified local cause | Undetermined*

**Local issue — Undetermined**

Failure is in the customer-managed application; cause not verifiable at Tier 1.

**Evidence-based rationale** *Cite the exact event or checklist finding that supports the label*

Sign-in completes and Teams works, so SIM-ENTRA-3108-01 is not the failing step, and no App Service event exists for East US. Under PaaS shared responsibility, the failing portal application is customer-managed. Tier 1 cannot see application or hosting diagnostics, so the cause is Undetermined and an unposted platform fault cannot be fully excluded.

## Disposition and communication *State Resolved, Escalated, or Pending. Add a user message or warm-transfer summary when required.*

**Escalated: application and platform integration are outside Tier 1 scope.**

### Warm-transfer summary

**Ticket and workflow:** TKT-3103 | EHR access portal (App Service, PaaS)

**Service-health baseline:** Azure Service Health (mock) | no App Service event | East US | 06:50; SIM-ENTRA-3108-01 ruled out

**Observed impact:** Ambulatory users cannot open the EHR portal after sign-in; patient impact not assessed

**Tier 1 checks and results:** PaaS confirmed; failure after successful sign-in; Microsoft 365 works; no App Service event

**Evidence ruled out:** Entra event; Azure Files advisory; device or account

**Remaining uncertainty:** Application versus platform cause; scope of affected users

**Receiving team:** Tier 2 Engineering

**Specific ask:** Find why the portal's App Service app returns "Service unavailable" after sign-in; open a Microsoft support case if platform involvement is found.

**Transfer/acceptance:** 07:50 | Tier 2 Engineering on-call | acceptance pending

**User update:** 07:52, portal issue with engineering, no workaround yet | next update 09:00

SECTION 4 OF 6

# TICKET 4 RECORD | NEWLY PROVISIONED NURSE CANNOT USE TEAMS

**Complete every required field**

| | |
|---|---|
| **Ticket ID** | TKT-3104 |
| **Reported symptom** | A newly provisioned nurse signs in to the managed device, but Teams shows a licensing message. Another nurse uses Teams on the same device. |
| **Affected workflow** | Microsoft 365: Teams on a managed clinical device. |
| **Service-health evidence** | Microsoft 365 Service health (mock) \| no Teams or licensing event \| 06:50 snapshot.<br>Azure Service Health (mock) \| SIM-ENTRA-3108-01 \| Microsoft Entra ID \| East US users \| Active, investigating \| 05:40 start, 06:50 snapshot (candidate; ruled out) |

## Tier 1 verification record

| # | Required entry | Learner response |
|---|---|---|
| 1 | Approved check performed | **Microsoft 365 support checklist**<br>**Service health:** No Teams/licensing event; SIM-ENTRA-3108-01 candidate<br>**Account status:** Active<br>**License/Teams:** Missing (not yet assigned)<br>**Provisioning:** Before shift (time not supplied); nothing assigned, so nothing propagating<br>**Device:** Enrolled and compliant<br>**Error:** Licensing message (exact text not supplied)<br>**Comparison:** Another nurse uses Teams on this device<br>**Determination:** Verified local cause |
| 2 | Evidence compared or ruled out | Ruled out: Entra event (sign-in works; error is licensing); device (compliant, works for another nurse); Teams service (no health event). |
| 3 | Scope boundary observed | No license assigned; no account, device, group, Conditional Access, MFA, or tenant change. |

**Determination** *Choose one: Platform correlation | Verified local cause | Undetermined*

**Local issue — Verified local cause**

Finding: Teams license not assigned.

**Evidence-based rationale** *Cite the exact event or checklist finding that supports the label*

The checklist shows the Teams-entitled license is not assigned, matching the licensing message. The account is active, the device is compliant, and another nurse uses Teams on it, so device and service work. The Entra event concerns sign-in failures; this nurse signs in successfully.

## Disposition and communication *State Resolved, Escalated, or Pending. Add a user message or warm-transfer summary when required.*

**Escalated: license assignment is a tenant action outside Tier 1 scope.**

### Warm-transfer summary

**Ticket and workflow:** TKT-3104 | Teams on a managed clinical device

**Service-health baseline:** Microsoft 365 Service health (mock) | no Teams or licensing event | 06:50; SIM-ENTRA-3108-01 (Entra ID, East US users, Active) ruled out

**Observed impact:** One new nurse cannot use Teams; others unaffected

**Tier 1 checks and results:** Account active; Teams license missing; device compliant; licensing message; works for another nurse

**Evidence ruled out:** Entra event; device; Teams service

**Remaining uncertainty:** Missed versus queued assignment; exact message text; time to take effect

**Receiving team:** Microsoft 365 Admin Team

**Specific ask:** Verify the nurse’s approved entitlement and, if authorized, assign the Microsoft 365 license with Teams; notify Tier 1 when complete.

**Transfer/acceptance:** 08:12 | Microsoft 365 Admin Team queue | acceptance pending

**User update:** 08:13, request passed to Microsoft 365 team | next update 10:00

SECTION 5 OF 6

# TICKET 5 RECORD | CLINICAL FILE-EXCHANGE SYNCHRONIZATION DELAY

**Complete every required field**

| | |
|---|---|
| **Ticket ID** | TKT-3105 |
| **Reported symptom** | The local file-exchange folder is accessible, but new non-production test files are not reaching the cloud endpoint. Last successful sync: 06:12. |
| **Affected workflow** | Azure Files: file server synced by Azure File Sync to an Azure Files cloud endpoint, East US. |
| **Service-health evidence** | Azure Service Health (mock) \| SIM-AZFILES-3108-02 \| Azure Files \| East US \| Active advisory, mitigation in progress \| 05:55 start, 06:50 snapshot \| next update 08:00 |

## Tier 1 verification record

| # | Required entry | Learner response |
|---|---|---|
| 1 | Approved check performed | **Cloud verification checklist: advisory comparison**<br>**Workflow:** Azure File Sync to Azure Files cloud endpoint, East US (confirmed)<br>**Service:** Match<br>**Region:** Match (East US)<br>**Window:** Match (advisory 05:55; last sync 06:12)<br>**Symptom:** Match (delayed sync)<br>**Local:** Folder accessible; no disk or share outage<br>**Responsibility:** Microsoft runs Azure Files; local server shows no fault |
| 2 | Evidence compared or ruled out | Ruled out: local folder or share outage; Entra event (different service). Not confirmed: impact on external exchange partners; delayed files are non-production. |
| 3 | Scope boundary observed | No file server, sync, Azure Files, or Azure configuration change; no forced sync. |

**Determination** *Choose one: Platform correlation | Verified local cause | Undetermined*

**Platform issue — Platform correlation**
Event: SIM-AZFILES-3108-02.

**Evidence-based rationale** *Cite the exact event or checklist finding that supports the label*

SIM-AZFILES-3108-02 states “Azure File Sync operations may be delayed for affected cloud endpoints” in East US from 05:55. Service, region, symptom, and window match (last sync 06:12). The local folder works with no outage, so local checks find no separate cause. This supports correlation, not proof.

## Disposition and communication *State Resolved, Escalated, or Pending. Add a user message or warm-transfer summary when required.*

**Pending: Microsoft-owned advisory; no local finding to transfer.**

### Status communication

**Audience/channel:** Health Information Exchange Operations | ticket update

**What is happening:** New files are not reaching the cloud copy; the folder still works

**What is confirmed:** Microsoft reports file-sync delays in our region; a fix is in progress

**What is being done:** Tracking Microsoft's updates; will confirm when files resume

**Authorized workaround:** None provided

**Next update:** After Microsoft's 08:00 update

**Prepared by/time:** Tier 1 Technician | 07:56

> *New files saved to the file-exchange folder are not reaching the cloud copy, though the folder itself works. Microsoft has reported file-sync delays in our region and is working on a fix. No workaround or completion time has been announced. We will update you after Microsoft's next update, expected at 08:00.*

**Escalation trigger:** If sync does not resume after mitigation, warm-transfer to Tier 2 Engineering.

SECTION 6 OF 6

# CASE SUMMARY

## Overall disruption picture and afternoon-shift handoff

| Ticket | Determination | Disposition | Receiving team | Follow-up |
|---|---|---|---|---|
| TKT-3101 | Platform issue — Platform correlation | Pending | Not escalated | Tier 1 \| after 07:45 update |
| TKT-3102 | Local issue — Verified local cause | Escalated | Identity Administrators | Tier 1 \| user update 10:00 |
| TKT-3103 | Local issue — Undetermined | Escalated | Tier 2 Engineering | Tier 1 \| user update 09:00 |
| TKT-3104 | Local issue — Verified local cause | Escalated | Microsoft 365 Admin Team | Tier 1 \| user update 10:00 |
| TKT-3105 | Platform issue — Platform correlation | Pending | Not escalated | Tier 1 \| after 08:00 update |

### Overall disruption picture *Summarize the verified platform correlations, local causes, and remaining uncertainty*

**Platform issues (2):** TKT-3101 correlates with SIM-ENTRA-3108-01 and TKT-3105 with SIM-AZFILES-3108-02; both are Pending on Microsoft.

**Local issues (3):** TKT-3102 (missing group membership) and TKT-3104 (unassigned Teams license) are verified local causes. TKT-3103 (EHR portal failing after sign-in) is a customer-side application issue with an undetermined cause.

**Uncertainty:** TKT-3103 is the main open question: no Service Health event covers App Service, and Tier 2 must confirm whether the platform is involved. No downstream effect on care coordination, telehealth, or scheduling has been confirmed.

### Afternoon-shift handoff *List open tickets, last update times, receiving owners, and next required actions*

Status as of 08:15; all five tickets open. Service status is from the 06:50 snapshot; record later Microsoft updates.

**TKT-3101:** Check the 07:45 Entra update; send the next user update; if failures persist after resolution, transfer to Identity Administrators.

**TKT-3103:** Confirm Tier 2 Engineering acceptance; user update 09:00. Highest clinical priority.

**TKT-3105:** Check the 08:00 advisory update; confirm files resume with HIE Operations; if not, transfer to Tier 2 Engineering.

**TKT-3102:** Confirm Identity Administrators acceptance; user update 10:00; verify access once fixed.

**TKT-3104:** Confirm Microsoft 365 Admin Team acceptance; user update 10:00; verify Teams once licensed.

**FINAL INTEGRITY CHECK** The case-summary determinations and dispositions must match the five individual ticket records exactly.
