Healthcare IT Hiring Evidence Reference

REFERENCE

Four program-aligned evidence categories for entry-level resume and portfolio review

Use these as evidence categories, not as a universal or exhaustive hiring scorecard. Employers may also assess troubleshooting, customer service, communication, ticket documentation, education or experience, schedule fit, and local workflow knowledge.

EVIDENCE CATEGORY	STRONG, CREDIBLE SIGNAL	TOO GENERAL ON ITS OWN
Microsoft support in a healthcare context	Names a scoped workflow and evidence: account verification, endpoint-compliance review, or approved Microsoft 365 support task in a simulated or authorized environment.	"Proficient in Microsoft Office"
EHR-adjacent workflow awareness	Describes approved client-side checks, documents the result, and escalates build-side, access-design, or clinical-workflow issues to the designated application team.	"Experience with healthcare software"
Applied privacy and security practices	Shows minimum-necessary documentation, identifier minimization, safe evidence handling, and use of the approved privacy or security incident path.	"HIPAA trained"
Tier 1 escalation discipline	Names the completed checks, unresolved finding, evidence reference, receiving role, requested action, and ownership confirmation.	"Escalates when needed"

SAFE CLAIM STANDARD	TIER 1 SCOPE BOUNDARY
State the environment, authorization, action, evidence, and outcome. Label simulations clearly. Use the earned certification title only after award; an exam may be listed as scheduled or preparation in progress.	Do not claim Azure infrastructure management, Epic security-group administration, organization-wide policy ownership, or other privileged work unless it was actually authorized and performed.

Quick evidence test

1. CONTEXT	Does the line identify a healthcare or simulated clinical-support context?	**2. SCOPE**	Does it distinguish permitted Tier 1 action from escalation?
3. EVIDENCE	Does it name the check, documentation, disposition, or verification result?	**4. SAFETY**	Is the claim accurate, identifier-minimized, and free of privileged-scope overreach?

Official grounding

HHS: Minimum Necessary Requirement | Microsoft Entra role permissions | Microsoft Endpoint Administrator certification
