Escalation Team Reference - Ridgeline Regional

MOCK REFERENCE - synthetic document created for this simulation

Team	Scope	Communication norms
Clinical Informatics	EHR functionality, order sets, clinical documentation issues, provider-facing system errors.	Submit via ticket with patient safety flag if applicable. Response target: 15 min for P1, 1 hr for P2-P4. Do not page after hours unless P1.
Network Operations	Connectivity outages, VPN, wireless, core network hardware, site-to-site links.	Call the NOC line for any outage affecting more than one unit. Ticket alone is sufficient for single-device issues.
Biomedical Engineering	Medical device malfunctions - infusion pumps, monitors, imaging equipment, nurse call hardware.	Always call, do not rely on ticket alone if a device is actively in patient use. Include device asset tag in the report.
Pharmacy Systems	e-Prescribing, medication order transmission, pharmacy-facing application errors.	Ticket during business hours. After hours, escalate through on-call pharmacist first, then IT if system-level.
Security & Facilities	Badge access, physical security systems, environmental alarms unrelated to clinical devices.	Non-urgent: ticket. Urgent (active alarm, access failure at a care area): call facilities dispatch directly.
Nursing Informatics	Workflow questions, training gaps, and clinical system usability issues that are not technical failures.	Route here when the issue is 'how do I use this' rather than 'this is broken.' Ticket only, no paging.
